Compressing Education

Former LSE MSc Thesis

Are students spending too many years in school? Could education be “compressed” – teaching the same content in fewer years – without affecting returns to education? I use administrative wage data and the staggered introduction of a German school reform to answer this question. I find a causal wage premium of 9% due to this head start. This premium can be explained by the additional experience affected graduates gain on the labor market. I find no impact on indicators of job match quality, or different sorting into firms, occupations, or industries.
